

# OpenStreetMap Gopher Gateway

(I was really really really bored! 😎)

# Gopher?

- You know, the thing before the Web...
- Directory-like presentation
- Current root server:  
<gopher://gopher.floodgap.com/>
- Still relevant
  - Twitter gateway

# Gopher Browser?

- Lynx
- Firefox: internal support removed
  - OverbiteFF plugin
- NetSurf
  - Branch not yet integrated

# Implementation

- Python add-on to [pyGopherD](#)
- Fetches the current tile by http to serve it back
- <http://revolf.free.fr/linux/osm.pyg>

# TODO

- Put it on git{orinous|hub|...}
- More error handling
- Handle different tile servers
- Cache tiles
- Use ImageMagick to join tiles?

# Looks like this
